

Paper cone with a unique Nextel top coating combined with a back coating for extra damping gives an unparalleled smooth and detailed paper cone sound.

FEA optimised magnet system with precisely fitted copper parts for excellent linearity, high power handling and low distortion.

Titanium voice coil former with a long copper clad aluminium winding for excellent force transfer, transient sound reproduction and large linear excursion. A unique adaptive rubber surround reduces radial resonances and prevents surround break up at large excursions. Low mechanical and electromagnetic damping ensure high quality reproduction of even the finest micro details in music.

Gold plated terminals mounted on a glassfibre reinforced plate to reduce contact resistance and improve reliability.

The frequency responses above show measured free field sound pressure in 0, 30, and 60 degrees angle using a 21L closed box. Input 2.83 VRMS, microphone distance 0.5m, normalized to SPL 1m. The dotted line is a calculated response in infinite baffle based on the parameters given for this specific driver. The impedance is measured in free air without baffle using a 2V sine signal.
